## ABOUT ME

Responsible and adaptable cybersecurity student with experience in web development (React, Node.js) having a desire to develop in the field of machine learning.

I have basic knowledge of Python including data analysis libraries (NumPy) and can easily learn new technologies. In team projects, I pay attention to details and communication. I am looking for an opportunity to apply existing knowledge and gain theoretical and practical experience in ML.

## SKILLS

### TECH:

- JavaScript, TypeScript, Python
- HTML, CSS
- React, Node.js, Express
- MongoDB, PostgreSQL
- Git

### SOFT:

- Teamwork
- Creativity
- Attention to details
- Eagerness to learn
- Problem solving
- Critical thinking
- Flexibility

## EXPERIENCE & PRACTICE

- **Front-end developer, university blockchain project:** developed certain pages of the web application according to the design in Figma using React. Worked closely with the team to ensure consistency of design and functionality
- **Front-end developer, course examination work:** Developed a web application from scratch as part of a course assignment. Used APIs from the Internet to integrate data into the application. Created an intuitive user interface and ensured stable operation of the application. Demonstrated understanding of React, component approach, and APIs.
- **Experience in Python and JavaScript development** gained through laboratory work at the university and self-study. My university projects included simple Python programs as well as the development of interactive web applications in JavaScript.
